

This folder contains do files used to prepare the data and results for the paper “International Trade and Retail Market Performance and Structure: Theory and Empirical Evidence” (authors: Philipp Meinen and Horst Raff)

The data used in this paper builds on anonymized micro data sets owned by Statistics Denmark (SD). Analyses of such data sets must be done on servers hosted by Statistics Denmark as Statistics Denmark does not permit such data to be used anywhere else. The analysis data set will be archived for at least 5 years. In the interest of scientific validation of analyses published using Statistics Denmark micro data the Department of Economics and Business, Aarhus University, will assist researchers in obtaining access to the data set. The access is conditional on SD accepting a contract with the researcher in which he accepts the conditions for using micro data, see

<http://www.dst.dk/en/TilSalg/Forskningservice/Dataadgang.aspx>.

Request for getting access can be emailed to: datamanager_econ.au.dk@econ.au.dk.

The following data sets are required:

- FIRM (general firmastatistik)
- UHDI (udenrigshandel diskretioneret)
- IDAS (IDA arbejdssetde)

Moreover, some auxiliary data sets are required, such as concordance tables between HS and BEC product codes and between old and new municipality codes in Denmark.

The following do files prepare the data:

- Data_Management_1_Firm-Level
- Data_Management_2_ProdFct
- Data_Management_3_Market-Level

The following do files prepare the tables with regression results in the paper:

- Regressions_Table_04_08_Baseline
- Regressions_Table_05_Selection
- Regressions_Table_06_07_PSM
- Regressions_Table_09_PSM_Chains
- Regressions_Table_09_PSM_Shops
- Regressions_Table_10_Exit
- Regressions_Table_11_RegionLevel

The following do file prepares the tables containing summary statistics in the paper:

- Descriptives_Tables_01_02_03

The files should be run in the order presented above.
